Replace the original text with **Option 1** (from my previous list) but add a small **Header** to it. This breaks up the black box and tells the user *why* they should read it.

Recommended Layout:

> ### Verified Accuracy Built for professionals who demand precision. We benchmark our calculators against NIST and ISO standards and peer-review every update, so you can trust your data—whether you're in the lab or on the job site.

Note on the label "Authority Signal": If you were asking if you should use the words "Authority Signal" as a visible title for that box—**definitely not.** That is marketing terminology. Users don't care about your "authority signal"; they care about **"Accuracy," "Trust,"** or **"Standards."**

Would you like me to draft a version specifically for a different audience (e.g., students vs. engineers)?

ok, i like this part: "Group them logically: Instead of a random list, use headers like "Popular Density Conversions" or "Related Pressure Tools." This helps Google understand the structure of your data." Can you help me to draft a prompt for AI that takes any existing
