

Operational Plan: Project Cernarus Remediation

1. Situation Analysis

Current Score: 4.1/10

Target Score: 10/10

The deep-dive research identified three critical failure points preventing the site from serving "Technical Teams":

1. **Identity Crisis (E-E-A-T):** The brand name "Cernarus" collides with the "Chernarus" video game map (DayZ/ARMA), confusing search algorithms and users. The site is also anonymous, lacking human verification.
2. **Invisible Utility (Information Gain):** The site claims to use "Quantus" infrastructure for verification but provides no evidence (citations, version numbers, or audit logs) to the user.
3. **Linguistic Inefficiency (Fluff):** The content is bloated with marketing abstractions ("programmatic craftsmanship") rather than technical specifications.

2. Operational Logic & Resource Allocation

- **Human Operator:** Project Manager, Final Editor, and "Face" of the organization.
- **AI System 1 (Contextual Engine - e.g., ChatGPT/Claude):** Copywriting, bio generation, and tone shifting.
- **AI System 2 (Research Engine - e.g., Perplexity/Search-enabled):** Sourcing specific ISO/NIST standards for citations.
- **AI System 3 (Code Engine - e.g., GitHub Copilot/Code Interpreter):** Generating Schema markup to fix the SEO entity confusion.

3. Execution Phase 1: Establish E-E-A-T (The "Who")

Objective: Eliminate the "Ghost in the Machine" problem and disambiguate the brand from the video game.

Step 1.1: Construct the "Editorial Board"

- **Context:** You cannot be anonymous in the YMYL (Your Money or Your Life) sector. You need a human face.
- **Action:** Create a "Standards Committee" page. If you are a solo operator, list yourself with your full professional credentials.
- **Human Task:** Gather your LinkedIn URL, degree details, and professional history.

PROMPT for AI System 1 (Contextual):

"I need to write a professional bio for the 'Lead Technologist' of an engineering calculator site. The tone must be clinical, precise, and devoid of marketing fluff. Focus on experience with data modeling, compliance, and systems engineering. Here are my raw details:. Write a 100-word bio that establishes high authority."

Step 1.2: The "Not a Game" Footer Disclaimer

- **Context:** Users arriving from gaming queries must immediately know they are in the wrong place to reduce bounce rate and signal intent to Google.
- **Action:** Add a permanent footer disclaimer.

PROMPT for AI System 1 (Contextual):

"Write a single-sentence legal disclaimer for the footer of 'Cernarus.com'. The goal is to explicitly state that the entity is an engineering standards firm and has no association with Bohemia Interactive, ARMA, or DayZ. Use neutral, legal phrasing."

4. Execution Phase 2: Purge and Specification (The "Fluff" Fix)

Objective: Replace "Programmatic Craftsmanship" with "Technical Specifications."

Step 2.1: Rewrite the "About/Philosophy" Page

- **Context:** Engineers do not care about your "obsession with moments." They care about update frequency and error margins.
- **Action:** Convert the "About" page into a "System Specification" sheet.

PROMPT for AI System 1 (Contextual):

"Act as a Technical Writer for an ISO standards body. Rewrite the following marketing copy into a technical specification sheet. Remove all emotional words (empower, obsess, orchestrate). Format it as a bulleted list of 'System Capabilities' including: Update Frequency (Weekly), Compliance Standard (ISO 80000), and Architecture (Edge-cached).

Input Text: 'We embrace a programmatic craftsmanship mindset, obsessing over the moments that matter...'"

Step 2.2: Rename the Taxonomy

- **Human Task:** Go into your CMS.
 - **Action:** Rename "Experiences" to "Tools." Rename "Sub-clusters" to "Categories."
 - **Reasoning:** Aligns with standard engineering nomenclature.
-

5. Execution Phase 3: Visualize Information Gain (The "Value" Fix)

Objective: Prove the "Quantus" claim by showing the data.

Step 3.1: Generate Dynamic Citation Blocks

- **Context:** Every calculator must cite its source. A conversion is not opinion; it is a standard.
- **Action:** For your top 5 calculators, generate a "Methodology Note" that cites the specific NIST or ISO code.

PROMPT for AI System 2 (Research):

"I am building a unit converter for. Find the specific international standard ID (ISO, NIST, or BIPM) that defines this conversion factor. Provide the exact publication year and the specific error margin if applicable. Output format: 'Standard: | Revision: | Source Authority: [Agency]'. "

Step 3.2: Create the "Audit Box" UI Text

- **Context:** You need to show "Versioning." Even if the backend is simple, the UI must display the governance.
- **Action:** Create a text block to be placed below the "Calculate" button.

PROMPT for AI System 1 (Contextual):

"Generate a UI text snippet that represents a data audit trail. It should look like a system log. Include: 'Model Version,' 'Last Revalidation Date,' and 'Hash ID.'
Example output: 'Model: v2025.1 | Revalidated: Jan 20, 2026 | Ref: NIST-HB44'."

6. Execution Phase 4: Technical SEO Surgery (The Brand Fix)

Objective: Force Google to understand "Cernarus" is an Organization, not a Place in a game.

Step 4.1: Generate Organization Schema

- **Context:** You must feed search engines structured data that defines your entity type.
- **Action:** Inject JSON-LD into the site header.

PROMPT for AI System 3 (Code):

"Generate valid JSON-LD 'Organization' schema for a website named 'Cernarus'.

1. Define the '@type' as 'EngineeringContractor' or 'Organization'.
2. Include a 'disambiguatingDescription': 'Provider of digital engineering calculation standards and financial modeling tools. Not associated with the Chernarus video game map.'
3. Include 'sameAs' links to the LinkedIn profile and any other professional profiles.
4. Ensure there is no reference to gaming keywords."

7. Operational Sequence Summary

Sequence	Action	Resource	Output
01	Identity	AI System 1	Professional Bio & "Not a Game" Disclaimer.
02	Deploy	Human	Paste Bio to "About" page; paste Disclaimer to Footer.
03	De-Fluff	AI System 1	Rewrite "About" page into "System Specs."
04	Deploy	Human	Update "About" page text. Rename "Experiences" to "Tools."
05	Research	AI System 2	Get ISO/NIST codes for top 5

			calculators.
06	Enrich	Human	Add "Standard:" and "Model: v1.0" text to calculator pages.
07	Fix SEO	AI System 3	Generate JSON-LD Schema.
08	Deploy	Human	Inject Schema into website header.

Final Check: Once these steps are complete, the site will move from "Anonymous/Confusing/Vague" to "Verified/Specific/Standardized," meeting the criteria for a high-trust Utility.
